## EVTM MOVING FORWARD...

The EndoVascular resuscitation and Trauma Management (EVTM) concept is moving forward and we are working on further collaboration and development. As for now, one of the major issues is the expansion of the JEVTM (Journal of EndoVascular resuscitation and Trauma Management). We encourage more submissions on endo and hybrid issues, endo resuscitation and critical care as well as issues on trauma. Some fantastic research was presented at the Pan-American EVTVM Symposium in Denver last November, and we highly recommend you to submit your work to the JEVTM. Basic science and clinical scientific work is preferred but also technical

reports and cases or images of interest are welcomed. The JEVTM is a unique platform for multidisciplinary work on hemodynamically unstable patients and we encourage all medical professions, both experienced and less experienced, to get involved!

The EVTVM Society is developing as well. Intense work on building different committees to facilitate collaboration between trauma, general, vascular, orthopedics, OBGYN, IR, ICU and ED professions on these issues. As this is a multidisciplinary, international collaboration between highly clinically...

## Journal of Endovascular Resuscitation and Trauma Management

## UPCOMING EVENTS

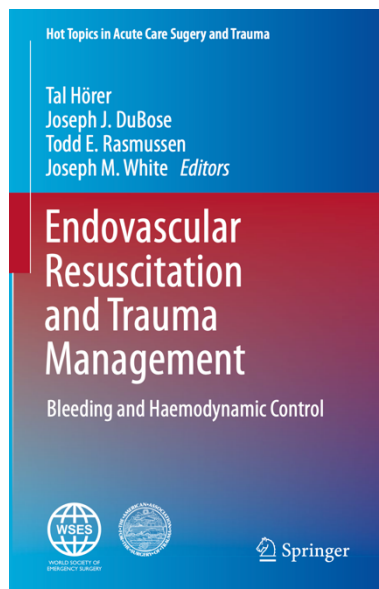

- **EVTM/REBOA Workshop**  
9-10 Mar, 2020. Paris, France
- **Caricoa Vascular Meeting**  
26-28 Mar, 2020. Rio, Brazil
- **Pan-Pacific Trauma Congress**  
2-4 Apr, 2020. South Korea
- **Casualties of War on Terror**  
14-16 Apr, 2020. Riyadh
- **EVTM Workshop**  
20-21 Jul, 2020. Australia
- **Sri Lanka Surgical Congress**  
13-15 Aug, 2020. Colombo
- **EVTM at ESVS**  
29 Sep – 2 Oct, 2020. Krakow

*"No ego, just good  
science and  
cooperation"*

...active medical professionals, this takes time. All help is welcomed and we encourage you to join so we can together help this society to continue to grow and be different from others based on the facts stated above.

There are numerous meetings, workshops and collaborations with other societies that continue to have success and develop. At times this is not easy, but the EVTm concept is getting more and more recognition and has now been published in several guidelines, books, manuals and peer reviewed articles in distinguished journals such as JOT, SHOCK, Injury, Eu J Trauma, Eu J Vascular etc. We hope and believe that this will only continue to progress thanks to your involvement and cooperation. We consider all of our members as ambassadors for the EVTm platform.

Apart from publications in the JEVTm, there are some new articles coming up as a supplementary to SHOCK and collaboration with DCR (Damage Control Resuscitation). REBOA, embolization, endografts and hybrid procedures as well as ECMO, SAAP and other techniques are under clinical investigation, ongoing trials and laboratory work. "No ego, just good science and collaboration" is our goal and the JEVTm as well as EVTm are non-profit platforms and will continue to develop in that way.

Last, but not least, the EVTm textbook has now been released. This is a collaboration with the World Society of Emergency Surgery's (WSES) Acute Care and Trauma Surgeons group where the book is part of the series "Hot Topics in Acute Care Surgery and Trauma". It focuses on

summarizing what is known and "how to actually use" the various endovascular methods for resuscitation and trauma management. It will help readers understand basic and advanced modern techniques for bleeding control and modern resuscitation, and how to apply them in clinical practice.

With that we would like to finish by taking this opportunity to thank everyone involved and wish you all a healthy 2020 as we start planning for the next EVTm Symposium in Örebro, Sweden, 3<sup>rd</sup> - 4<sup>th</sup> June, 2021.
